## EDUCATION

## University of Waterloo

June 2028

Candidate for BASc in Mechatronics Engineering

Waterloo, ON

• Coursework: Data Structures, Algorithms, Linear Algebra, Circuits, OOP, Microprocessors, Digital Logic (FPGA, PLC), Mechanics of Deformable Solids, Structure and Properties of Materials, Statistics, Ordinary Differential Equations

## EXPERIENCE

## Undergraduate Research Assistant

September 2024 – December 2024

University of Waterloo - Engineering IDEAs Clinic

Waterloo, ON

- Instrumented a wearable knee crutch, allowing force readings for gait analysis and material selection via FEA.
- Built swarm robots using Gazebo and TurtleBot3, showcasing LIDAR integration and odometry in Python.
- Implemented adaptive cruise control on physical robots using PID controllers in C++ and Python packages.
- Utilized Docker to enable robot development across all operating systems, streamlining the deployment of ROS2 apps.

# Mechanical Engineering Associate

January 2024 – April 2024

Sheartak Tools Ltd.

Waterloo, ON

- Designed 15 custom mechanical assemblies with DFMA in SolidWorks for woodworking machinery to ensure precise fit
  and function
- Applied GD&T principles to guarantee manufacturing accuracy for custom machine parts.
- Created 25 detailed installation manuals, including parts lists and assembly instructions, ensuring ease of use for customers.
- Developed a **Python** script to upload 2000+ products on Shopify, saving 5 hours of manual work per week.

#### Robotics Engineering Team Lead

February 2023 – May 2023

Skills Ontario

Etobicoke, ON

- Developed embedded C/C++ Arduino program to drive 3-phase motors and bluetooth controls.
- Designed custom protoboard assembly using SMD and TH soldering, saving 30% chassis space.
- Routed electronics using KiCAD, resulting in efficient and customized layouts for a custom robot from scratch.
- Drafted aluminum chassis using AutoCAD, increasing durability and space in the robot chassis.

#### Projects

# <u>Instrumented Knee Crutch</u>

- Designed a digital CAD twin of an existing knee crutch in SolidWorks.
- Developed a data aquisition system using I2C and Arduino, converting a bathroom scale for real-time load measurements.
- Researched and integrated strain gauges and load cells, raising load measurement range from 10kg to 50kg.
- Prototyped **3D-printed** mounts and knee platforms for strain gauges, ensuring user comfort.
- Built Python scripts for force distribution visualization in Matplotlib, with data logging for gait analysis.

## Self-Balancing Unicycle

- Utilized C++ and CMake to develop a graphical simulator that demonstrates PID control to keep the unicycle upright.
- Implemented Git submodules to reference third-party OpenGL wrappers, to visualize the simulation.

## IoT Light Switch Bot/Mount

- Designed a **3D-printed** mount with an integrated web application for remote light switch control.
- Implemented an Ubuntu Linux web server, enabling remote HTTP access to room lights globally.
- Innovatively enhanced safety by designing a physical light switch mount, eliminating high-voltage work.

### TECHNICAL SKILLS

Mechanical: SolidWorks, AutoCAD, GD&T, CAD, FEA, FEM, DFMA, 3D Printing, Machine Tools, Onshape, Fusion360 Electrical: KiCAD, I2C, SPI, UART, Arduino, ESP-IDF, Soldering, Oscilloscope, LiDAR, PLC, LAD, VHDL, FPGA Software: Python, C, C++, CMake, OpenGL, JavaScript, TypeScript, HTML, CSS, Bash, SQL, LaTeX, ROS2, Docker Libraries/Frameworks: OpenCV, Mediapipe, Linux, Ubuntu, Git, SSH, Django, Flask, NumPy, Matplotlib, Node.js, React
